

FIREPLACES-FLUES-CENTRAL &
UNDERFLOOR HEATING

hydrofire™

Superior quality at exceptional prices

Hydronic Central Heating

If you're comfortable handling your own installation, or if you've already got a system that needs upkeep, we also supply components!

OUR SYSTEMS OFFER

- Three choices of heat sources, from wood burning classics to convenient electrics.
- Two choices of heat output, between unobtrusive underfloor and stylish wall radiators.
- Upgradeable auxiliaries, like remote control, domestic water heating, and more.

hydrofire.co.za

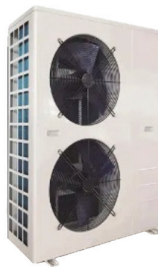

Heat Sources

Every system needs a heart, and the heat source is ours. This unit will heat up the water for your system, before it cycles through the house, bringing heat along the way.

We offer three types of heat source: boiler fireplaces, burning firewood; pellet boilers, burning compacted wood pellets; and heat pumps, running off of electricity.

While a fireplace remains the cheapest option, the timer controls of the pellet boiler and heat pump offer unparalleled convenience.

Heat Outlets

Just as important as your heat source is where that heat is going. We offer two options for our heat sources, underfloor heating and wall mounted radiators.

Radiators

Our radiators are modular aluminum units, designed to circulate the air to ensure quick and even room heating.

Their modular nature means you can match their size to both the wall space and the look you're happiest with.

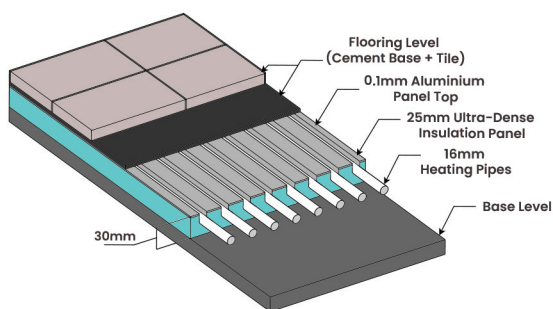

They come fitted with a manual control head for individual control, and are an easy installation overall.

HYDRONIC CENTRAL HEATING

Underfloor Options

Our paneled installation adds between 22 and 32mm to the floor height, and offers a quick heating option, reaching temperature in around half an hour.

Higher efficiency than our radiator option, and completely unobtrusive, the underfloor option is the prime choice for your system.

Auxiliary Upgrade

In addition to the basic comforts, all of our systems also offer auxiliary upgrade options. Starting with a storage tank, the systems can be upgraded to allow for:

- Remote Electronic Control
- Operation when the heat source is off
- Domestic water heating integration, Hydronic solar feed, and more!

Additional Parts

If you're comfortable handling your own installation, or if you've already got a system that needs upkeeping, we also supply components!

Pressure Reducers

Press Fittings

Multilayer Pipes

Circulation Pumps

Underfloor Insulation
